

# WARRANTIES

RUDY PROJECT S.p.A. - Via B. Marcello, 44 - 31100 Treviso - Italy  
tel +39 0422 433011 - fax +39 0422 431978 - info@rudyproject.com - www.rudyproject.com

## MANUFACTURING DEFECTS

Rudy Project will replace any lenses with manufacturing fault. Credit will be issued upon check of the defected lenses by Rudy Project.

## COATING WARRANTY

Diamond Coat and Hard Coating are warranted for a period of two years. This warranty is limited to a one-time replacement of the defective product with one having the same characteristics. Damage due to improper care and handling is not covered. The Rudy Project Quality Dept is in charge of the defective rating (defective material or improper care).

## SCRATCHED LENSES

Hard Coating is always included within Rudy Project Rx lenses. Even so it provides superior resistance properties, it cannot prevent scratches or damages in case of crashes, grinding or contact with scratchy material. Please consider that scratches may affect Laser, Multilaser and Racing coating more than other tints. Rudy Project will not respond in case of damages coming from Improper use and care. Any evaluation will be determined by the Rudy Project Quality Dept.

## WARRANTY AGAINST LENS BREAKAGE

Kindly note that EXCLUSIVELY ImpactRX 2 Black, 2 Red, 2 Laser Black, 2 Laser Brown, 2 Laser Red, 2 Laser Purple lenses are GUARANTEED AGAINST BREAKAGE. In case of breakage, the lenses must be returned to the Rudy Project laboratory in order to exclude any possible causes resulting from improper use of the device.

## PROGRESSIVE LENS WARRANTY

In case of non-fitting, the purchased lenses would be replaced with a new pair of lenses with different characteristics or with a pair of monofocal lenses.

THE WARRANTY IS VALID WITHIN 60 DAYS FROM THE SHIPPING DATE.

## PHOTOCHROMIC LENS WARRANTY

Photochromic pigments of Rudy Project RX Lenses are guaranteed for a period of 2 years only in case of total lack of activation. The filter category, described in the general catalogue, due to different manufacturing process, could be different compared to plano lenses.

Please consider that photochromic activation is affected by environmental conditions like temperature and altitude. Pigments react to UV rays: stronger is the radiation, faster will be the activation. Please consider that as per all organic materials, also photochromic pigments suffer for "aging" process: it is related to exposure to UV rays and their intensity; there's no relation to the number of activations during its life.

## TAKE CARE OF YOUR RUDY PROJECT SPECTACLES

Rudy Project is focused on the development and selection of materials with the highest standards in order to ensure maximum durability of its products.

To correctly use and preserve your glasses and make their life longer, please consider the following instructions:

- Do not leave your glasses face down and put them in their case when you are not wearing them.
- Clean your glasses regularly with mild detergent and cold water; dry them with a soft and clean cloth.
- Avoid any contact with acetone, ammonia, glue, setting lotion, solvent, chain oil (both liquid and spray), fragrance, sprays, suntan cream, insecticide and household cleaning materials.
- When exposed to the sea water, regularly wash lenses and frames with fresh water, in order to prevent oxidation and corrosion.
- Do not leave your glasses in hot environment that may damage your lenses and frame (for example on a car's dashboard).
- Do not use them in the sauna.
